

WOW REPORTS

Create Professional Reports, Invoices, Statements, PO's.... From Your Databases!

WORD to HTML WORD Merge WORD XML PDF PDF WCODE

This example started with creation of a invoice file in MS Word. The word file was populated with sample replacement variables and saved as HTML. At runtime, WOW reads the HTML, and replaces all dynamic data and send the resulting HTML to the browser.

Use your data ↑ to create real-time invoices →

Customize with your logo or other images →

And generate attractive reports for any type of business transaction →

Design Reports with any HTML Editor or WORD. WOW Reports Merges Real Time Data!

Create professional looking reports in a SNAP with WOW Reports.

How it Works:

WOW Reports allows you to create a "report" using a WYSIWYG editor while specifying variable data placeholders. At runtime WOW Reports merges the report with runtime database information and sends HTML or PDF to the user. Personalized and customizable forms can also be created—ask us how!

- Create reports in minutes
- Access to any company database
- Report delivery to any web browser
- Print multiple reports
- Use for invoices, statements, reports, forms

"I really love this reporting capability and the option to be able to print multiples in a single report. I can't wait to start on some more."

~Gail Marshall, North Carolina Board of Nursing
