

# WOW EMAIL

Integrate EMAIL into Your Applications! The Possibilities are Endless.

The screenshot shows the 'Other Email Settings' section of the WOW Mail Add-on interface. It includes fields for 'From ID' (planetj@planetjavainc.com) and 'Subject' (Your Vacation Request). Below these is a rich text editor with various formatting options. A message at the bottom states: 'Your vacation request has been answered. Please check the Vacation Request Manager application to view the decision that was made, as well as any relevant made by your manager. Click [here](#) to view the status.'

← Create and manage your email entries with an HTML editor. Utilize business data for reports and recipient lists!

The screenshot shows the 'Work with Email Server Entries' table in the WOW Mail Add-on interface. The table has columns for Control ID, Server IP Address, User ID, From Address, and To Address. It lists four entries with their respective IDs, server addresses, and email addresses.

Control ID	Server IP Address	User ID	From Address	To Address
0	smtpout.secureserver.net	kgetting@planetjavainc.com	kgetting@planetjavainc.com	kgetting@gmail.com
3	smtpout.secureserver.net	travis@planetjavainc.com	travis@planetjavainc.com	travistorgerson@gmail.com
4	smtp.gmail.com	travistorgerson@gmail.com	travistorgerson@gmail.com	travis@planetjavainc.com
8	smtpout.secureserver.net	planetj@planetjavainc.com	planetj@planetjavainc.com	travistorgerson@gmail.com

Below the table is an 'Add Server Entry' button.

Integrate your SMTP outgoing email server to manage email functions to send monthly, weekly or daily reports or updates. →

*WOW EMAIL allows your organization to create and manage custom emails that integrate seamlessly with your WOW applications. Send HTML emails to end users on a schedule or based on an entry or update to the your database. Emails can be customized to specific users in a process known as “bursting”. Send scheduled reports or other data sets to managers. Examples: approve or disapprove employee vacation requests, send automatic invoices to customers or email sales reports to managers. The uses are endless!*

- Utilizes any standard SMTP server
- Great to use for confirmation or receipt of request or form
- Build custom “work flow” applications
- Bursting support
- Customizable for any needs
- Integrates with all WOW versions
- Includes a WYSIWYG HTML editor used to create emails
- Automatically includes your business data
