

## WOW Hand Held Add On Feature

### SECURITY

Your data is always secure using advanced WOW security features. Allow access to specific users or groups of users.

### DATA DRILL DOWNS

Access your data and bring it to the Web using the WOW builder. Create association operations to drill down into your data.

### REAL TIME DATA

For use with any version of WOW—Entry through Enterprise.

### ANY DATABASE

Any relational database can be used...SEQUEL, MySQL, ORACLE, PostgreSQL, DB2, etc.

- Allow end users access to your database to make more accurate decisions.
- Provide users the ability to update records on the fly.
- 
- 

The WOW PDA add on option gives WOW developers the ability to transparently create browser based applications that run on mobile PDA devices such as Symbol 3333, Pocket PC, and others. This add on is activated by simply specifying the “mobile” template option from the WOW application specification screen. This feature reduces the display to the size of the unit allowing interactive applications to be run on any hand-held unit. Use this feature to connect your mobile workers to backend databases in real time. Do away with the tedium of report generation and ensure the data your employees are working with is accurate.

Examples include hospital workers, hotel staff, on road sales people, insurance agents, manufacturing floor workers, utility workers etc. Possibilities are endless.

This add on feature requires any of the base WOW versions including WOW Entry, Standard, Professional or Enterprise
